WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

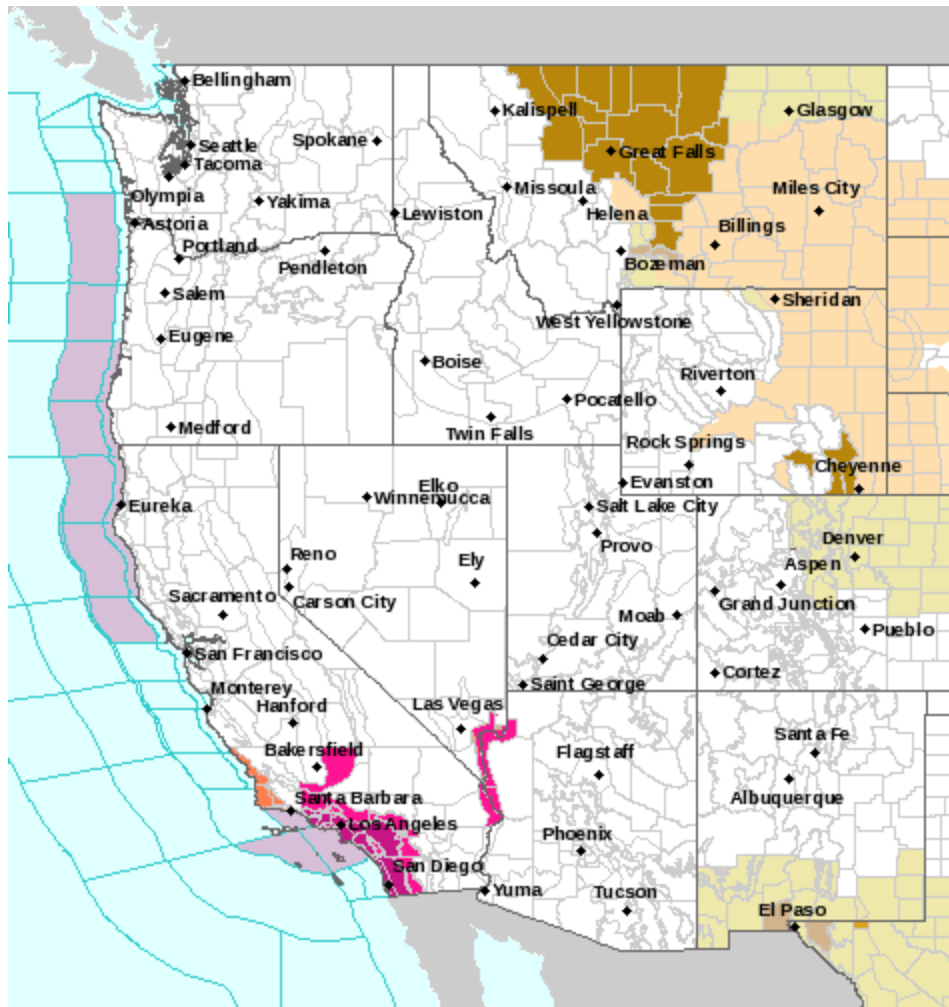

High pressure has moved into Northern California and conditions will be warm and dry through the coming weekend. There will be a sharp warming trend that will hold for a few days with our warmest inland areas mostly around 90. Relative humidity (RH) will also be on the decrease with somewhat poor to moderate RH overnight recovery (30-50%). Slightly cooler conditions are expected Thursday through the weekend with the warmest areas cooling down into the lower 80s, but afternoon RH will remain low (10-20%) and some areas will see better overnight recovery. Relatively light to locally moderate gusty N to NE/offshore winds will continue into Tuesday for areas from the Cascade/Sierra crest westward to some coastal locations. The windiest spots will likely see peak gusts around 30-35 mph at times, but these locations will be rather isolated. Most of the windy places will see peak gusts of 25-30 mph. The wind will help lower the RH as well. Lighter NW to NE winds are expected the rest of the week through the weekend with the strongest winds Thursday.

SOUTHERN CALIFORNIA

Surface high pressure over the Great Basin will bring northeast to east winds of 15 to 30 mph with gusts to 50 mph to the mountains and below the canyons and passes of Southern California through Tuesday afternoon.

Winds will decrease starting Tuesday evening and become light by Wednesday afternoon. Very strong high pressure aloft will bring record heat through Tuesday, with 70s to low 80s across the mountains, mid 80s to mid 90s in the Central California valleys, and upper 90s to 105 in the Southern California valleys. Cooling will take place starting Wednesday as the ridge aloft weakens a little, but temperatures will stay well above normal through this weekend. Minimum humidity will be in the single digits and teens and humidity recovery at night will be poor away from the coast through this weekend.
